You are an astronaut traveling through space on a mission to find a new habitable planet for Earth's population. Your ship suddenly malfunctions and there seems to be no way to fix it. As you try to figure out a plan, you notice a nearby planet that appears to be perfect for human life. However, there is no record of this planet in your systems. Option 1: Make an emergency landing on the mysterious planet and explore. Option 2: Send a message to Earth about the malfunction and wait for instructions. Option 3: Attempt to fix the ship and continue on the original mission, ignoring the new planet. Option 4: Investigate the planet from a safe distance before making any decisions. (Note: These options may have consequences that affect the outcome of the story. Choose wisely!)
