

You are a member of a spacecraft crew sent to explore a mysterious planet. As your ship descends toward the planet's surface, an unexpected system malfunction causes the ship to veer off course, and crashes into the planet's surface. You find yourselves stranded on the planet with limited supplies and no communication with Earth. What do you do? Option 1: Explore the surrounding area to gather resources and assess the damage to the ship. Option 2: Stay put and try to make contact with Earth using any means necessary. Option 3: Search for signs of life or intelligent beings on the planet. Option 4: Split up and search for a way off the planet.

You and two other crew members set out to search for signs of life or intelligent beings on the planet. As you explore, you come across strange structures and markings that suggest there may have been intelligent beings on the planet at some point. Suddenly, you hear a loud roar coming from the distance.

Option 1: Investigate the source of the roar to see what it is. Option 2: Return to the crash site and report your findings to the rest of the crew. Option 3: Hide and wait to see what comes towards you. Option 4: Keep moving on with caution.
