You wake up on a spaceship hurtling towards an unknown planet. You have no recollection of how you got there or what you were doing before. As you look around, you notice a console with a blinking red button in front of you.

Option 1: Press the red button.

Option 2: Ignore the red button and search for clues about your situation in the spaceship.

Option 1: You press the red button and suddenly, the spaceship starts shaking violently. A loud alarm blares throughout the ship as you brace for impact. After a few minutes of turbulence, the ship crash-lands on the planet's surface.

Option 1.1: Try to repair the ship and find a way off the planet.

Option 1.2: Explore the planet to see if there is any sign of life or civilization.

Option 2: You choose to ignore the red button and start searching for clues about your situation. After some investigating, you find a logbook that lists your identity and mission as part of a crew sent to terraform the planet. The logbook also states that the ship's engine is damaged, and without repairs, the ship will crash-land on the planet's surface.

Option 2.1: Try to repair the engine and steer the ship towards the designated landing zone.

Option 2.2: Use the emergency shuttle to evacuate the ship and find a way to signal for help.
